

As construction continues on the scalehouse, several changes to site access procedures will impact RC Fliers members. Please review the following updates and share this information with all members to ensure a smooth transition.

**Effective Saturday, October 17, 2026:**

**Access During Business Hours (Monday – Friday)**

- A flagger will no longer be stationed in Lane 3 to verify RC Fliers member access.
- All members must enter through **Lane 2**, which leads to the smaller scalehouse building typically used by commercial businesses.
- Personnel will be stationed at this building to verify member access before allowing entry.
- This procedure will remain in effect during regular landfill business hours.

**Access During Saturday Business Hours**

- All members must enter through **Lane 1**, which is between the large and small scalehouse building.
- Personnel will be stationed at this building to verify member access before allowing entry.
- This procedure will remain in effect during regular landfill business hours.

**Access During Nonbusiness Hours**

- When the landfill is closed, RC Fliers members may continue accessing the property through the designated metal gate.
- Members are responsible for moving any cones blocking access, opening the gate, driving through, replacing the cones, and ensuring the gate is securely closed behind them.
- The gate will remain unlocked during nonbusiness hours; however, **members must ensure it is properly closed after each entry or exit.**
- Members bringing guests during nonbusiness hours are allowed to have guest in their own vehicle following them to the field. (As a reminder members are responsible for their guests and they are not to be left unattended).

**Guest Access and Parking**

- Members bringing guests must have their guests **in the same vehicle upon arrival** during business hours.
- Parking at the main office will not be available for guests or members to leave vehicles and transfer into another vehicle to access the flying field.
- Members and their guests must coordinate meeting at an offsite location if they intend to ride together.

These temporary access modifications are necessary to accommodate ongoing construction while maintaining safe and orderly traffic flow throughout the facility.

We appreciate the RC Fliers members' cooperation and flexibility during this transition. Please ensure all members are aware of these changes prior to arriving at the facility.

If you have any questions or concerns regarding the updated procedures, please do not hesitate to reach out.

Thank you for your understanding and continued cooperation.
